Kondapur, Hyderabad, Telangana 500084

Professional Summary

Software Engineer with 2.5+ years of experience building production-grade full-stack applications and AI-powered solutions. Experienced in developing scalable APIs, AI agent workflows, LLM integrations, and backend services using Python, TypeScript, and React. Focused on reliable AI experiences, system integration, and delivering maintainable software in fast-paced engineering environments.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, Bash
AI & LLM Engineering: Claude, OpenAI, LLM Integration, Prompt Engineering, Structured Outputs, Embeddings, RAG, AI Agents, Multi-Agent Orchestration, Tool Calling, MCP
Frontend Engineering: React 19, Next.js, Vite, TanStack Query, React Hook Form, Zod, Tailwind CSS, shadcn/ui, Radix UI, TipTap, React Flow
Backend Engineering: FastAPI, Pydantic, asyncio, SQLAlchemy 2.0 (async), Node.js, Express.js, REST APIs, OpenAPI, OAuth 2.0, RBAC
Data & Databases: PostgreSQL, Redis/Valkey, Prisma ORM, Alembic, Schema Design, Data Modeling
Cloud, DevOps & Observability: Azure Container Instances, Azure Blob Storage, Managed Identity, Docker Compose, GitHub Actions, Multi-Environment Deployment, structlog, Lefthook, Cloudflare Tunnel
AI Development Tools: Claude Code, Cursor CLI, Subagent Workflows, Agent Hooks & Guardrails

Experience

SOFTWARE DEVELOPMENT ENGINEER - I
September 2025 – Present

RVAI Global (Acquihired TYNYBAY) *On-site*

- Lead contributor (**57%** of **2,900+** commits, **160+** merged PRs) to **NRILegal** CRM; built asynchronous automation layer with **asyncio** for SLA tracking, escalations, and webhook replay across a **FastAPI** backend and **React TypeScript** frontend.
- Engineered module-scoped **RBAC**, immutable audit logging, **GDPR** erasure, and **Argon2** authentication with refresh-token rotation; maintained strict schema consistency across **150+** Alembic migrations.
- Built batch execution infrastructure for **Badger** (AI QA platform), dispatching isolated **Azure Container Instances** jobs via **Taskiq/Redis** with HMAC-signed callbacks; maintained backend validated with **mypy –strict** and **pytest**.
- Designed provider-neutral agent runtime supporting **Claude Code** and **Cursor CLI** adapters, orchestrating multi-agent reviewer workflows across **Vertex AI, Anthropic, and OpenAI** (**Dobby**).

SOFTWARE DEVELOPMENT ENGINEER - I
April 2024 – August 2025

TYNYBAY (now RVAI Global) *On-site*

- Developed full-stack **Warehouse Management CRM** using **React.js, Node.js, Express.js**, implementing **RBAC** and relational data models with **PostgreSQL** and **Prisma ORM**.
- Solely engineered **Homesify** real estate platform from scratch to production with **Next.js**, integrating **Google Maps API**, CDN optimization, and automated technical SEO.
- Developed and optimized RESTful APIs for **MLOFLO** mortgage application platform using **Python, Node.js, and Express.js** with **React.js** and **MongoDB**; built automated intake ticketing bot.
- Resolved critical production issues through root-cause analysis and performance tuning within Agile bi-weekly sprint cycles.

Projects

NRILegal | *FastAPI*, *React 19*, *PostgreSQL*, *SQLAlchemy 2.0*, *Alembic*, *Azure*, *Docker*, *Claude Code* Jul 2026 – Present

- Lead contributor (**57%** of **2,900+** commits, **160+** merged PRs) to a legal-services CRM and case-management platform for a UK/Canada/India law firm, owning end-to-end workflows from enquiry capture and lead management through engagement letters, payments, and matter management across a **FastAPI** backend and **React TypeScript** frontend.
- Built an asynchronous automation layer using **asyncio** for SLA tracking, escalations, rule-based notifications, and webhook replay, supported by **HMAC-verified** webhook receivers, integration clients.
- Implemented module-scoped **RBAC**, immutable audit logging, **GDPR** erasure, and Argon2 authentication with refresh-token rotation; developed bulk Excel lead imports with fenced-lease job claiming and undo, maintaining schema consistency across **150+** Alembic migrations.

Badger | *Python, FastAPI, Next.js, Azure Container Instances, Claude Code, PostgreSQL, Redis* 2026 – Present

- Built execution infrastructure for an **AI-driven QA and code review platform**, running isolated **Azure Container Instances** batch jobs dispatched through **Taskiq/Redis**, with HMAC-signed callbacks, reconciliation, orphan cleanup, and automated teardown.
- Designed a **provider-neutral agent runtime** with **Claude Code** and **Cursor CLI** adapters, supporting organization-level provider selection, capability gating, standardized failure codes, usage-limit detection, and conformance testing for a coordinated multi-agent reviewer system.
- Delivered end-to-end features across **FastAPI** and **Next.js**, including OAuth onboarding, email verification, admin approval workflows, QA review gates, evidence exports, and server-driven data tables. Maintained a test-first backend validated with **pytest**, **mypy –strict**, **pyright**, and **ty**.

Dobby | *AI Orchestration Platform, Vertex AI, Anthropic, OpenAI* 2025 – Present

- Contributed to an internal **AI orchestration platform** that coordinates workflows across LLM tools, integrating providers including **Google Vertex AI, Anthropic, and OpenAI**.
- Developed and maintained reusable orchestration capabilities used across internal projects, simplifying multi-provider integration and standardizing AI workflow execution.
- Extended platform capabilities to meet **client-specific requirements**, integrating customized tools and functionality to support external client deployments.

Warehouse Management CRM | *React.js, Node.js, Express.js, PostgreSQL, Prisma* 2025 - 2025

- Developed a full-stack warehouse management system using **React.js, Node.js, and Express.js** to manage inventory, orders, and customer relationships.
- Designed **RESTful APIs** for inventory updates, order processing, and customer data, implementing **role-based access control (RBAC)** for administrative and warehouse staff permissions.
- Designed relational data models using **PostgreSQL and Prisma ORM**, improving data consistency and supporting reliable application workflows.

Homesify | *Next.js, React, Google Maps API, Technical SEO, CDN, Web Crawlers* 2024 - 2025

- Solely developed a **real estate web application from scratch to production**, translating provided Figma designs into a complete Next.js application that enables agents to publish property projects and prospective buyers to discover and interact with listings.
- Implemented **technical SEO and search discoverability**, including metadata optimization, XML sitemaps, and crawler configuration to support search engine indexing and improve the visibility of property pages.
- Optimized **page performance and content delivery** through CDN configuration and page-level optimization, while integrating **Google Maps** for location-based property discovery.

MLOFLO | *Full-Stack AI Website Builder, Python, Node.js, Express.js, React.js, MongoDB* 2024 – 2025

- Developed and optimized **RESTful APIs** using **Python, Node.js, and Express.js**, integrating React.js and MongoDB to support mortgage application workflows.
- Diagnosed production issues through systematic debugging and testing, optimizing backend data retrieval and frontend-backend communication to improve application stability and performance.
- Developed a **regex-based ticketing bot** that captured user requirements through rule-driven question-and-answer interactions, automating initial requirement collection before conversational AI became prevalent.

Education

ST. Martin's Engineering College, Hyderabad April 2024
B.Tech. in Computer Science and Engineering (AI & ML) *CGPA: 7.68 / 10.00*

Certifications

Claude Certified Architect – Foundations 2026
Anthropic
