Professional Summary

AI and Backend Engineer with 2.5+ years building production LLM applications, RAG pipelines, and full-stack platforms using Python, TypeScript, and Claude/OpenAI APIs. Designed a custom LLM orchestration framework adopted across 10+ projects, and deployed a production RAG chatbot for claims processing at a multinational insurance company.

Experience

Software Development Engineer I April 2024 – Present
RVAI Global (Acquired TYNYBAY) *Hyderabad*

- Built a production **RAG-based claims processing chatbot** for a multinational insurance company, using **Azure Document Intelligence** for document parsing, section-based chunking, and **Cosmos DB** for vector storage; implemented **Claude Sonnet** with **tool calling** for data retrieval, top-K vector search, retry logic (max 3), and human-in-the-loop escalation.
- Designed and built **Dobby**, a provider-neutral **LLM orchestration framework** supporting **Claude, OpenAI, and Vertex AI** with tool calling abstraction, structured output parsing, streaming, token usage tracking, retry/fallback across providers, and conversation memory management; adopted across **10+ internal and 2+ client projects**.
- Built **Claude-powered AI features** for **NRILegal** (legal CRM for a multi-country law firm, 200+ users): document summarization via **structured outputs**, AI-drafted client responses with human-in-the-loop review, and **LLM-based mail classification** for automated service routing with manager approval.
- Engineered the **NRILegal** backend: asynchronous automation layer using **asyncio** for SLA tracking, escalations, and webhook replay; **HMAC-verified** integrations with Azure Communication Services and DocuSeal; module-scoped **RBAC**, immutable audit logging, **GDPR** erasure, and **Argon2** authentication with refresh-token rotation across a **FastAPI** backend and **React TypeScript** frontend.
- Built execution infrastructure for **Badger** (AI QA platform): dispatched isolated **Azure Container Instances** batch jobs via **Taskiq/Redis** with HMAC-signed callbacks and automated teardown; designed provider-neutral agent runtime with **Claude Code** and **Cursor CLI** adapters; runs identified critical security vulnerabilities with suggested patches.
- Solely developed **Homesify**, a real estate platform with **20,000+ listings** from scratch to production using **Next.js**, integrating **Google Maps API**, CDN optimization, and automated technical SEO for search discoverability.
- Optimized API performance for **MLOFLO** mortgage platform by consolidating redundant API calls and removing unnecessary aggregations; fixed critical infinite-loop production bug in employment portal; built automated ticketing bot processing **20–30 daily tickets** to Jira, replacing fully manual intake.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, Bash
AI & LLM Engineering: Claude API, OpenAI API, Vertex AI, RAG Pipelines, Embeddings, Vector Search, Tool Calling, Structured Outputs, Prompt Engineering, Multi-Agent Orchestration
Backend: FastAPI, Pydantic, asyncio, SQLAlchemy 2.0, Node.js, Express.js, REST APIs, OpenAPI, OAuth 2.0, RBAC
Frontend: React, Next.js, TypeScript, Tailwind CSS, TanStack Query, Zod
Cloud & Data: PostgreSQL, Redis, Cosmos DB, Azure (Container Instances, Blob Storage, Document Intelligence, Communication Services), AWS (EC2, S3), Docker, GitHub Actions, Alembic

Education

ST. Martin's Engineering College, Hyderabad April 2024
B.Tech. in Computer Science and Engineering (AI & ML) *CGPA: 7.68 / 10.00*

Certifications

Claude Certified Architect – Foundations 2026
Anthropic
